

We ALL Need a Shot in the Arm!

Learn the Facts about the COVID-19 Vaccines

MYTH	FACT
Corners were cut because the vaccines' testing and production were rushed.	The COVID-19 vaccines underwent the same rigorous testing process as other vaccines.
The vaccines can infect me.	You cannot get COVID-19 from a vaccine.
The mRNA technology is too new and untested.	The technology used in the vaccines has been studied for decades.
The vaccines will change my DNA.	The vaccines do not change or interact with your DNA.
The vaccines contain microchips, tracer technology, fetal tissue, stem cells, mercury, aluminum, luciferase, pork products, or preservatives.	The vaccines do not contain any of these things.
If I have already had COVID-19, I do not need the vaccine.	It is possible for people to be re-infected, so you may still be advised to get a vaccine even if you have already had COVID-19.
As soon as I get the vaccine, I am immune and do not have to wear a mask.	You should wear a mask, wash your hands, avoid crowds, and practice social distancing after getting the second dose.
